Installation

Required Tools

- Drill
- Drill Bits
- Level
- Metric Allen Wrenches

For more information, please visit 3-form.com or call 800.726.0126

MAY 2018 | MAN-RTG-350-01 | REV 002 © 2018 3form, Inc. All rights reserved.
Installation

1 Preparation

a Separate 3form Chroma Lens from back reflective panel.

b Determine where the LightBox will be mounted and verify proper fasteners based on substrate.

c Attach 4" stainless steel barrels (3-15-0728) to the back reflective panels for the ceiling with hardware provided. Make sure this is done before mounting panels.
Installation

2 Attach Back Reflective Panel

Attach back reflective panels to wall and ceiling with enough fasteners to allow them to be structural. Make sure panel edges butt together tightly so all hardware will line up. When mounting the inside corner reflective panels, it is important to offset the reflective panel on the ceiling at least ½" so that the light lens will slide properly over the panel. The top wall panel will need to be mounted at least 5½" from the ceiling (measure actual finished light lens to determine net dimension) to ensure the top wall lens will slide past the ceiling lens.
Installation

3 Connect Electrical

Once the reflective panel is mounted to the wall, have a qualified electrician wire the lights and verify that everything is working before the lens is installed.

Wall Slide Dimmer (3-60-497) can have up to 12 96 W PS (3-60-765)

Add up to 50’ max of 14AWG+ wire. Customer supplied.

Note: Wiring is as shown unless shown differently on 3form Lighting Layout Drawing

For more information, please visit 3-form.com or call 800.726.0126

Installation

4 Reattach 3form Chroma Lens

Reattach the 3form Chroma Lens with stainless steel caps (3-15-0028) along the returns that will screw into the steel internal brackets (ceiling boxes first followed by wall boxes). Use stainless steel caps (3-15-0028) in the face of the panel screwing into the 4" stainless steel barrels (3-15-0728) (ceiling only).
