Installation

1 Preparation

a. Separate 3form Chroma Lens from back mounting panel by removing hardware using an Allen wrench.

b. Determine where light box will be mounted and verify proper fasteners based on substrate.
   
   Determine where wiring will go through wall and drill an appropriate sized hole.
Installation

2 Attach Back Reflective Panel

Attach back reflective panel to wall with enough fasteners to allow it to hold the weight of the feature (max spacing of 18”). Make sure the steel mounting brackets are facing the proper direction so that they are on the least visible sides.

Steel Mounting Brackets

18” max (458mm)
Installation

3 Connect Electrical

Once the reflective panel is mounted to the wall, have a qualified electrician wire the lights and verify that everything is working before the lens is installed.
